

Hang-It!™ ProGrip Guitar Stand

GS8100 / 10704

Features and Benefits

When a guitar is placed in the yoke of the Hang-It!™ ProGrip Guitar Stand, two swiveling arms automatically lock across the headstock to prevent falls and automatically release when the guitar is lifted. Padded contact points provide a secure grip and protect the guitar's finish. The shaft adjusts in height allowing precise positioning of the guitar's body against the leg bumpers. Further features include light-weight yet rigid construction, a collapsible tripod base, and an upper yoke that flips forward for use and folds flat for ease of transportation or storage.
