

Safety Cable

SSACB28 / 14865

NEW PRODUCT

Features and Benefits

Protect overhead-mounted equipment and the people below it with the SSACB28 Steel Safety Cable. Once speakers, lights, or other devices are properly mounted to a rigging system, simply wrap this cable around the connection points as a backup attachment to prevent falls and minimize the effects of possible mounting issues. The 28" braided-steel cable combines the strength to hold 60 lb with the flexibility to snake through and around a variety of devices, brackets, and trusses. Looped ends and an included carabiner make quick work of locking it in place.

Specifications
