

32-48 Channel Mixer Cover

MDA7032 / 14869

Features and Benefits

The MDA7032 32–48 Channel Mixer Cover is a soft, lint-free, weather-resistant enclosure that keeps an audio mixer or similarly sized device from gathering dust when not in use and also protects against damage caused by debris, UV rays, and moisture. Made of high-quality spandex, the cover stretches to envelop a wide range of midsize to large mixers with 32 to 48 channels and contracts to prevent slipping for a snug, secure fit. A cinch cord with a spring-loaded cord lock provides extra tightening to ensure the cover stays firmly in place. The entire cover folds or rolls up into its built-in closable pouch for ease of load in, setup, teardown, and load out while also enabling compact storage and efficient transportation. When the cover is in use, the built-in pouch lays flat and is completely hidden inside the cover. Made of durable spandex for long-lasting protection, the cover's plain black design unobtrusively blends into any stage, studio, or practice setup for a professional presentation.

Specifications

Application: Mixer protection

Length: 47"–53"

Width: 24"–29"

Depth: 12"

Material: Spandex

Color: Black
