

PS-6 Popper Stoppers Windscreen

The PS-6 Popper Stopper is widely recognized throughout the recording and post-production communities as the leading tool in pop elimination technology. With a 6 inch (7.62cm) diameter, the highly durable four-layer screen stops plosive consonants such as "p" and "b", while the fully adjustable 14 inch (35.56cm) gooseneck and mic stand clamp ensure flexibility across any number of applications.
