

#222SLBR FULL STAGE POCKETS

Ace Backstage Co.'s Large-Sized Stage Pocket, the #222SLBR Full Stage Pocket is made of heavy duty steel. The flush Full Stage Pocket conceals audio, data,

communications, electric, video,

voice, AC power, and switches etc. below the floor surface for easy access and to prevent connector damage. The Larger Capacity inter-changeable panel system permits easy custom connector panel configurations. The optional ACE #PNL-1212 Panel will mount 12 "Connectrix" Connectors (24 sq. in. panel area) or (2) ACE #PNL-106 Panels which will also mount 12 "Connectrix" Connectors (11 sq. in. panel area each - 6 Connectors each). All Ace Stage Pockets are welded steel construction, with an 11 ga. (.120" thick) lid and mounting flange (Solid Brass Lid and Mounting Flange on #222SLBR) and a 16 ga. (.060" thick) Stage Pocket Body assembly. The Full Stage Pocket resists bending under even the most severe stage loads (Tested to more than 2500 lbs). Removable spring loaded hinge pins permits easy exchange of lids for standard lid, locking lid and other custom applications.

A generous cable way slot of 3/8" x 8" permits easy cable exit from the stage pocket, even for large gauge speaker cables. A cableway slot closure channel closes the slot when not in use. This Stage Pocket has an easy installation into 8.5" x 8.5" cutout in the stage floor.

Open easy access from top or back to connector panels for easy installation. A scratch/wear resistant finish, oven cured powder coat is electro-staticly applied inside and outside. Decorator neutral antique copper vein, antique silver vein or textured black finishes are standard. Brass and Stainless Steel versions available by special order. Rubber lid stops cradle the lid to prevent lid rattle.

#222SLBR FULL STAGE POCKET

Ace Backstage Co.'s Standard Vertical Slant Panel Stage Pocket Systems offer "Connectivity" Solutions with a flexible, reliable, and simplistic design. The flexible design of the Vertical Slant Panel Stage Pockets Trim Bezel and Lid Assemblies, Custom and Prefabricated Aluminum "Connectrix" Panels, and large selection of "Connectrix" Connectors allow the Stage Pockets to be installed in many different applications, including audio, communications, data, electric, video, and voice terminations. Ace Backstage Co.'s Standard General Use Vertical Slant Panel Stage Pockets feature welded heavy duty steel construction, choice of 3 decorator oven cured powder coat finishes (inside and outside), 2 lid choices (Standard and Carpet), plus solid brass or stainless steel trim bezel lid assembly finishes. Add a host of stock prefabricated or custom audio, communications, data, electric, video, and voice panels and connectors for a complete Stage Pocket System.

Ace Backstage Co.'s Vertical Slant Panel Stage Pockets are available in a variety of sizes (Mini, Half, Full, and Double Wide Stage Pockets) making them flexible in both form and function and able to meet your individual requirements. All Standard Vertical Slant Panel Stage Pockets are UL Listed except for the Mini Pocket. For more details on Ace Backstage Co.'s Stage Pocket Systems call the Ace Order Desk at 661-295-5760.
