

#PNL-100 SERIES ALUMINUM PANELS

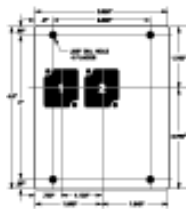

Standard #PNL-100 Series Stage Pocket Panels are created from high strength aluminum alloy (6061-T6) that is .062" thick. Each standard panel is finished with electro-static applied, oven-cured black semi-gloss powder coat. Engraving the standard panel is fast and easily accomplished on a separate dedicated CNC engraving machine. The finished panels show bright aluminum in the engraved characters and need not be back filled. ACE #PNL-100 Series standard panels are flat, strong, and rigid like the typical thinner mild steel panels.

Because the panels are machined and not punched they stay flat and undistorted unlike punched panels which distort in the punching process. PNL-100 Series Stage Pocket Panels will mount separately or in combination in all Ace Stage Pockets. The diagrams below illustrate Ace Backstage Co.'s Aluminum #PNL-100 Series Stage Pocket Panel specifications. The illustrations show dimensions as well as the Net Layout area of the panel. *All Dimensions are for reference only.*
