

QV10e - Headset Condenser Microphone

The QV10e headset mic allows drummers, keyboardists and other musicians to perform "hands free" vocals without affecting their playing technique. It produces a full-range sound with enough definition to ensure that every word is heard clearly, even at higher volume levels.

The elegant, lightweight low profile headset design produces a wide 60 Hz to 18 kHz frequency response for accurate vocal reproduction. Its unidirectional cardioid pickup pattern provides maximum gain before feedback. The condenser mic has a flexible gooseneck for easy microphone positioning. In addition, the QV10e has a waterproof design that's perfect for high-humidity environments. The PM6 phantom power adapter is also included.

- Elegant, lightweight low profile headset design
- Wide 60 Hz to 18 kHz frequency response for accurate vocal reproduction
- Flexible gooseneck for easy microphone positioning
- Waterproof design perfect for high-humidity environments like aerobics instruction
- Unidirectional cardioid pickup pattern provides maximum gain before feedback
- PM6 phantom power adapter included
